TEXT:

BOISE, Idaho, Apr 3, 2002 (BUSINESS WIRE) - PCS Edventures! ("PCS") (OTCBB:PCSV) and Children's Technology Group Inc. ("CTG") today announced a relationship whereby PCS will help market CTG's Garfield Island(TM) -- a safer and more secure Internet community for kids, loaded with fun and educational features.

Under the terms of the agreement, PCS will market Garfield Island to its relevant customer database on a revenue sharing basis for each paying member of Garfield Island's Club Surf community produced by the campaign.

"We are pleased to join CTG in its efforts to protect kids on the Internet," said Tony Maher, CEO of PCS Edventures!. "Allowing kids to learn and explore the Internet safely is very consistent with our company values and our mission to develop innovative learning products for children."

Developed for children from four to fourteen years of age, Garfield Island is a free, kid-safe Web browser that allows kids to surf only pre-approved websites . Additional free features include Desktop Lockdown ("Locks down" the desktop so children cannot enter parents files and programs) and the

ability

for parents to add (or block) additional websites from virtually anywhere.

Surf Club members receive safe, talking e-mail and chat, encouraging words and

chore reminders, language and personal information filters, exclusive Garfield

games, engaging activities and an animated, talking Garfield.

"As one of our first affiliate marketing arrangements in a product launch which began only last week, we are very excited that PCS Edventures! has agreed to help us market Garfield Island," said Greg Writer, CEO of

Children's

Technology Group. "We look forward to a long-term relationship with PCS as we

take another step toward our goal of creating the world's largest and safest

online community for kids."

Garfield Island downloads and demonstrations are available on the Internet at

<http://www.garfieldisland.com>.

About Children's Technology Group

Children's Technology Group Inc., with offices in San Diego and in Golden, Colo., is committed to building the world's largest and safest online community for children. Through the distribution of its Web browser suites built upon its proprietary MindWalker(TM) technology, Children's Technology Group provides children with fun, easy-to-use, and meaningful tools for their

continued education, entertainment, and exploration of the Internet in a safe

and secure environment. Parents control the application through CTG's Web-based, password protected administration portal --

<http://www.MomsAndDads.com>. The Company markets and distributes its products

by offering private-label (or co-brand) opportunities and revenue-sharing relationships with major organizations. Additional information regarding CTG

can be found at <http://www.abctg.com> or by calling 303/275-3466.

About PCS Edventures!

PCS Edventures! is a recognized leader in the design, development and delivery

TEXT:

ORLANDO, Fla., Apr 23, 2001 (BUSINESS WIRE) - Netkey Creator 5.0 Software Suite Sets New Industry Standard for Web Kiosk Security, Usability and CRM Capabilities; 30-day Free Trial Available from Netkey Web Site

Netkey, Inc., the leading provider of software for Web-enabled kiosks, ATMs and managed PCs, today unveiled Netkey Creator 5.0, a new version of the industry's most robust and technologically advanced software suite for kiosk

application design, security, and integration. Netkey made the announcement at

KioskCom 2001 in Orlando, the kiosk industry's premier conference and exhibition. Netkey is a major sponsor of KioskCom and is demonstrating the capabilities of its award-winning technology at Booth 121 today and Tuesday.

Netkey Creator is the world's most popular software solution for Web-based self-service devices including kiosks, ATMs and managed PCs, providing companies with the backbone for an integrated, multi-channel, e-CRM strategy.

Netkey software is currently used by leading companies including Borders, Yahoo!, J.C. Penney Co., and Microsoft to sell to, inform and service their customers. Netkey Creator 5.0 is the latest advancement in Netkey's line of kiosk software solutions, offering an enhanced development interface, "drag and drop" integration with kiosk peripheral devices, and robust support for complex multimedia graphics and video that provide significant benefits to users.

"So many businesses make the mistake of powering their kiosk with a standard

Web browser and Web site filtering software," said Frances Mendelsohn of Summit Research, a leading kiosk industry observer. "They are missing the point; a kiosk is not a Web site in a box."

"The magic of a kiosk comes from an engaging, straightforward experience for

the end-users," Mendelsohn continued. "It's the only way to deliver a high

return on investment for the kiosk provider, be it increased sales, customer service, CRM data collection, or brand enhancement. You need the right software to make the magic happen. The new features in Netkey Creator make it an excellent solution for companies looking for a best-in-class software platform for fast deployment of a multi-channel strategy."

"Customers experience reduced costs of deployment and higher returns on their Web kiosk investment by using Netkey Creator 5.0," said Alex Richardson, president and CEO of Netkey. "Years of development and proven market success have become the basis for Netkey Creator's rock-solid reliability, scalability and ease-of use. Combining Netkey Creator 5.0 with our Netkey Manager kiosk network management server software provides businesses with a comprehensive solution for building and maintaining a kiosk-based sales and marketing channel."

The Netkey Creator 5.0 Software Suite

The Netkey Creator suite of products provide robust Web kiosk application development, design and security, including touch-screen friendly user interfaces, operating system and keyboard lock-down, URL and surf control, system logging, and multi-media support. Organizations can take their existing informational or e-commerce Web site and deploy it on a kiosk in a storefront or branch office, providing additional ways to optimize headcount and improve customer service.

- Netkey Creator: The powerful interactive application features in Netkey Creator provide URL restriction, keyboard lockdown, and multimedia welcome screens to attract viewing customers, in addition to controlling in-coming and outgoing Web access . Netkey Creator is the ideal solution for information-based Web kiosks.
- Netkey Creator Plus: Offers all the rich functionality of Netkey Creator plus tight integration with common kiosk peripheral devices through a patented integration module. Netkey Creator Plus delivers packaged interfaces with popular peripherals including printers, card readers, security mats and more. Netkey Creator Plus helps organizations get to market faster with Web kiosks for transactions or e-commerce.

- Netkey Creator Studio: The feature-rich authoring environment in Netkey Creator Studio allows robust Web-based kiosk applications to be developed using common scripting languages such as VBScript and JavaScript. Netkey Creator Studio enables integrators and solution providers to create applications that integrate with virtually any kiosk peripheral device, including non-standard accessories.

Web Kiosk Development and Deployment Time Reduced

Netkey Creator 5.0 includes an enhanced application programming interface (API) that maximizes a developer's ability to quickly create robust kiosk applications. Among other things, developers can now access JavaScript configuration tools, text editing features, and pop-up keyboard functions with the click of a button. Netkey Creator also contains a tree-view for properties of objects and for visibility of the content being modified for the kiosk environment.

First to Market with Standards for Peripherals and Graphics

Netkey Creator gives users the ability to add peripherals with "drag and drop" ease. This is accomplished through the standardization of integration protocols for the industry's most popular kiosk accessories, such as security mats, credit card readers, and infrared scanners. Peripheral integration had previously required custom software development. The advent of the new software will result in a significant savings and reduced timeline for kiosk deployments.

Netkey Creator now supports richer electronic graphics, Flash, and multi-media - all with improved color definitions. These enhancements will help draw more users to the kiosk and provide a richer experience. They also allow for businesses to incorporate more of their multi-media assets through the kiosk, such as television-style advertisements and interactive videos.

Accelerate the Adoption Rate of Internet Assets

Netkey Creator 5.0 substantially increases the intelligence of any standard kiosk application. Many retailers and financial institutions include the ability to surf the web as part of their kiosk program. Netkey Creator 5.0 has

an automatic time out function to avoid monopolization of the kiosk by one customer - the software disables the feature when it detects a purchase or credit card transaction is in process.

Fast Analysis of Customer Usage Data

Netkey kiosks are becoming a critical customer touch point in the retail, financial services and hospitality industries as organizations seek new ways

to leverage their investment in Web-based information and e-commerce assets.

In the next phase of CRM technology, businesses are increasingly demanding measurable ROI and full integration of their kiosk networks with existing marketing and communications channels to better segment customer bases and deliver targeted messages, enabling the delivery of a single "customer view."

Netkey Creator 5.0 provides instant integration with Netkey Manager, the industry's most powerful solution for kiosk network monitoring, reporting, analysis and content management. Netkey Creator's Custom Logging Information

feature allows for easier creation and tracking of customer information such

as credit card transactions, questionnaires, and other events.

Netkey Creator is available immediately. Contact Netkey for pricing. A 30-day

free trial of Netkey Creator 5.0 is available for download from the Netkey Web

site: www.netkey.com

About Netkey, Inc.

Netkey, Inc. is the recognized leading provider of innovative and scalable software products and services for self-service devices including kiosks, Web-enabled ATMs and managed PCs. Netkey offers a comprehensive Internet-based

software platform for delivering content, services and applications to a broad

range of customer-activated point-of-sale (POS) and point-of-information (POI) appliances.

Leading retailers, banks and other organizations use Netkey's scalable e-business technology to deliver rapid returns on investment and enhanced customer service. Netkey's software suite has become the authoring platform of choice for developers and systems integrators across the globe, such as NCR.

Frost & Sullivan ranks Netkey as "the premier provider of kiosk software." Netkey's list of forward-thinking customers includes Yahoo!, J.C. Penney Co.

Microsoft, Service Merchandise, Ford Motor Co. and Borders. Netkey is located

in New York, San Francisco and Branford, Conn. Netkey holds U.S. Patent No. 5,761,071 for its browser kiosk system and U.S. Patent No. 6,078,848 for its

peripheral integration software for browser kiosk system. For more information

about Netkey and its award-winning solutions, call 1-800-443-7924, e-mail info@netkey.com, or visit www.netkey.com.

EDITOR'S NOTE: Netkey's President & CEO Alexander Richardson and Director of

Marketing, Robert Ventresca, will be available for interviews about Netkey Creator at Netkey's booth No. 121 at KioskCom in Orlando on April 23 and 24, 2001

TEXT:
COLLEGE STATION, Texas, Dec. 2 /PRNewswire/ - NetNearU (NNU), an industry leader in management software solutions for the public **Internet access** market, announced today an innovative software product to dramatically increase

Wi-Fi

hotspot revenues. Available immediately, the Company is now offering an enhanced version of NNU Runtime Engine, called NNU Runtime Engine for Wi-Fi.

This software allows hotspot operators to deploy low-cost wireless kiosks in their locations.

"We recognize that many people may not have their laptops or required Wi-Fi technology when visiting a hotspot such as a cafe," said Larry James, chairman and CEO of NetNearU. "Installing a wireless kiosk based on NNU Runtime Engine for Wi-Fi opens a hotspot's available market to virtually 100% of customers. Most wireless locations achieve immediate profitability after installing this solution."

This is a unique solution that only NetNearU, with its extensive research

and development investment in kiosk platforms, can offer. Many competing solutions provide a stationary kiosk, but these will not operate on a wireless

connection, seamlessly integrate into a Wi-Fi hotspot, nor have the cost-saving features of NNU Runtime Engine for Wi-Fi. The software allows the kiosk to be "locked down" meaning unacceptable content or unauthorized system

file access is eliminated. This greatly reduces content liability and system

management costs. By installing NNU Runtime Engine, the location operator can

also upload and rotate advertising content.

Advertising content can be managed through NetNearU's ADTRACKOS(TM) system. The use of interactive advertising content opens yet another source

of hotspot revenues. ADTRACKOS allows advertising across an unlimited number

of locations, and advertising campaigns can be localized and categorized based

on a virtually unlimited number of parameters. Displaying advertising content

is completely flexible. It can appear in windows around the browser, on the

screen saver when the terminal is idle, or both.

WiSE Technologies is a leading provider of wireless environments based on

the Wi-Fi standard and a NetNearU partner. "WiSE Technologies is consistently

searching for the best technology alliances to further improve

functionality

and ease of use," said Gary Murray II, CEO of WiSE Technologies. "We therefore look forward to the addition of NNU Runtime Engine for Wi-Fi within

all of our locations to lower administrative costs and create additional revenue streams through interactive advertising."

Previously, installing a kiosk with this functionality was very capital intensive, with many wired kiosks costing more than \$5000 per unit. With a wireless kiosk based on NNU Runtime Engine, virtually any Windows(TM) based personal computer, costing as little as \$500 is now a full-featured kiosk.

The software is available immediately and costs \$100 per wireless terminal. However, if the customer subscribes to the ADTRACKOS solution to manage their advertising content, NNU Runtime Engine for Wi-Fi is free.

NetNearU's roster of blue chip clients includes: TCG Public Communications Inc, a wholly-owned subsidiary of AT&T Corporation; Verizon Communications Inc.; Federated Systems Group Inc., a subsidiary of Federated

Department Stores, Inc.; Cable & Wireless; Sprint Pay Phone Services Corporation; and British Petroleum Oil UK Limited.

For a live demonstration of the NNU Runtime Engine for Wi-Fi solution, visit the NetNearU booth (#401) at the 802.11 Planet show in San Jose, CA, December 4 & 5, 2002.

About NetNearU

NetNearU Corp. provides comprehensive point-of-access management solutions

including central administration systems and client software for distributed

devices. The Company's software solutions manage networks of broadband wireless access points utilizing the 802.11 standard, as well as Internet-based kiosks and web payphones used to provide public Internet access, mobile

professional data services, e-commerce applications and customer service functions. The Company is headquartered in College Station, Texas. More information about NetNearU may be found at <http://www.nnu.com>.

TEXT:

Manassas, Va., Feb 24, 2000 (BUSINESS WIRE) - Feb. 24, 2000

Created By PACEL Corp. (PLRP) For Child Watch of North America,
New Software Allows Parents To Limit Child's Access On PC
As Well As Specify URLs For Exclusion

ChildWatch(TM), an innovative multi-faceted family-safe software program and

screen saver which empowers parents to monitor and control what their children have access to on their PCs and the Internet, has been created by PACEL Corp. (OTCBB:PLRP), a software applications development company in Manassas, Va., for Child Watch of North America, the non-profit organization

formed in 1992 to work with parents and children in helping to prevent abductions.

The ChildWatch(TM) software will be distributed nationally, free to the general public, with the financial support of corporate sponsors. Texaco, the

first major sponsor to sign on, has announced that it will test-market the new product during the months of March and April 2000 in selected states.

As

part of its campaign, the software will be distributed free at all Corporate

Texaco gas stations and participating retail outlets throughout the test states. Child Watch of North America is currently negotiating with other major corporations to become part of the national campaign expected to be launched by the end of May.

An internal part of the new ChildWatch(TM) software, is an Internet database

which will provide pertinent information to help find missing or abducted children as well as blocking family unfriendly Web sites. Subscription fees are as low as \$5 per month of which Child Watch of North America will receive

20% or a minimum of \$1 per registration per month.

"We are very excited by the new software package developed by PACEL Corp. and

by the enthusiastic response of the business community to support our efforts

in finding missing and abducted children," said Don Wood, president of Child

Watch of North America. "Texaco is the first of several major corporations we

expect to come aboard to help promote and distribute the new ChildWatch(TM) software. We fully expect this new product to become a major weapon in the ongoing efforts of law enforcement agencies to retrieve missing children and

return them to their families."

Texaco is proud to be a sponsor of Child Watch of North America Inc. and support this worthwhile project. There is no more valuable commodity in our society today than our children. It is imperative that there be a concerted effort in this nation to ensure the safety and well being of our young people. We want to thank Child Watch of North America and PACEL Corp. for creating an invaluable new safety tool. "To have something happen to your child is probably a parents worst nightmare," says Texaco General Manager and

Child Watch Board Member Chris Murdock. "Child Watch teaches parents how to protect their children from abduction and also serves as a resource if a child is abducted. We're extremely pleased to play a role in helping Child Watch get its message out to the public."

According to David Calkins, president of PACEL, the new ChildWatch(TM) software is an adaptation of PACEL's existing WinSentry(TM) on-screen security software. "It gives parents the ability to connect to an updateable database of Internet sites deemed as 'family-unfriendly' by a committee composed of child experts from organizations such as Child Watch of North America, local, state and federal law enforcement agencies, judicial representatives and child psychologists," he said.

"By using this software, parents do not have to spend a great deal of time themselves finding the sites beforehand or relying on a robotic search engine

that can seriously limit full utilization of the Internet," Calkins explained. "The program allows parents to control what programs are available, monitor and record activities on the computer, giving them an accurate, updated picture showing how each child is using the computer. In view of what we have learned from the Columbine High School tragedy in Colorado, this type of tool might have deterred what happened there."

The ChildWatch(TM) software offers parents concerned with the safety of their children, several important features, including:

- Password Access -- Only authorized persons can access the computer with selected permissions for each user.
- Internet Filtering -- Subscribers are connected to an updated Internet database of inappropriate sites which are automatically blocked from being downloaded from the Web to your PC.
- Application Lockout & Time Restriction -- Parents can set access limits to specific applications and files and restrict times on the computer.

- Event Logging -- Parents can monitor the activities of those using the computer since there is an automatic log and record created of files opened, Web sites visited , applications ran, etc.
- Screen Saver -- The screen saver features photos and updates of missing or recently recovered children, and also prevents another user from "masquerading" as the logged-on user when the computer was not shut down. This feature forces the new user to log-in, de-activating the screen saver , and, thereby, re-setting the user privileges.

PACEL Corp. provides high-value technology solutions allowing clients to enter the new millennium with the highest level of productivity and capability. These business solutions enable companies to capitalize on rapidly changing opportunities within the global marketplace.
